STATEMENT OF POLICY

BIOCHEMICAL AND BIOPHYSICAL RESEARCH COMMUNICATIONS has been initiated to meet the need for the rapid dissemination of information in all areas of experimental biology. This new medium is intended to afford an opportunity for rapid publication of timely and significant observations in the form of short but well documented communications. It will enable investigators in diverse fields of modern experimental biology better to keep abreast of current ideas and findings.

Rapid dissemination of this knowledge should prevent unnecessary duplication of effort; furthermore, new and exciting information will reach investigators in a minimum length of time.

It is hoped that authors will feel free to submit reports of current investigations which will be of immediate value to other scientists and promote the general progress of biochemical and biophysical research.
